# Initial Setup

- First you will have to download the zip we have sent to you and paste the same in the appropriate location.
- You will have to extract the zip by right clicking on the file and choosing the option **extract here**.

Python Installation

Here are the steps defined to install **python**(3.8.7).

- Download Python from this link [32-bit] [64-bit].
- Double click on downloaded python installer and you will see below screen

- Check the Add Python to PATH checkbox and then click on Install Now.

Project Configuration

Here are the steps to configure your credentials.

- Open **Epic-Pass-Automation** folder and double click on **config.py** file.

- We already have set configuration as per your requirements but you can modify the same as per your need in the same manner. After modification you will have to click ctrl+s for saving the same.
- Now click on **installer.** This will install all the requirements for this project.

Schedule a Task

Now follow the instructions from this link starting from step-4. The bat file for our case will be run.bat instead of Run_Python_Script.bat. This file (run.bat) is present in the Epic-Pass-Automation folder.
